

1. A Bald Eagle has a wingspan of 6-7 feet, a White Pelican has a wing span of 8-9 feet.

Hold your arms straight out. Ask someone to measure your arms from fingertip to fingertip.

2. A Bald Eagle can fly up to 35 miles/hour.

Ask someone to time you as you run 20 yards, then use the conversion chart to see how many miles/hour you can run.

3. Owls have the ability to stare for hours.

Ask someone to record how long you can stare at them without blinking.

4. A cormorant dives deep in search of fish. It can hold its breath for about 15 minutes (900 seconds).

Ask someone to record how long you can comfortably hold your breath. Stop if you feel at all dizzy.

**5. In 10 seconds, a hummingbird beats
its wings 700 times;
Chickadee = 270 times;
Starling = 45 times;
Robin = 23 times;
Crow = 20 times;
Turkey Vulture = 0-5 times.**

Ask someone to count as you flap your
arms for ten seconds. Which bird are you
most like?
